PROFESSIONAL SUMMARY

Full-Stack Software Engineer specializing in enterprise microservices, secure RESTful API development, and distributed data pipelines. 4+ years of hands-on experience at Barclays delivering end-to-end backend and modern UI integrations for global compliance and risk platforms. Strong background in C#/.NET core, Angular, SQL database optimization, DevOps CI/CD pipelines with a strong focus on code quality, clean architecture, maintainable solutions and engineering best practices.

TECHNICAL SKILLS

Databases : SQL Server, PostgreSQL

Backend: C#, C++, C, JavaScript, Java (21), TypeScript, Python, Go (Golang)

Frontend: Angular, Node.js, React (18/19), Vite, Tailwind CSS, HTML5, CSS3

DevOps: Docker, Kubernetes, GitHub Actions (CI/CD), GitLab, OpenTelemetry, Jenkins

APIs and Tools: Swagger, Postman, Insomnia, Bitbucket, SonarQube, Jira, Confluence

Engineering Practices: Agile/Scrum, Code Reviews, Unit Testing, Performance Optimization, Technical Documentation

Domain Knowledge: Banking systems, Risk and Finance Platforms, Regulatory and Compliance systems

EXPERIENCE

Senior Software Engineer | ***BA4*** | ***Barclays*** , ***Pune, India*** *(Apr 2025 – Present)*

- Developed and delivered full-stack applications, owning the development lifecycle from SQL Server database design, table creation, and stored procedure development to C#/.NET Core REST APIs and Angular frontend integration.
- Resolved 20+ critical production defects across backend microservices, database layers, and Angular interfaces through cross-functional collaboration and root-cause analysis, supporting 99.9% application availability.
- Drove engineering excellence and delivery governance through Agile ceremonies, technical discussions, code reviews and CI/CD workflows, ensuring reliable deployments and adherence to global banking security standards.
- Leveraged AI-assisted development tools, including Claude AI, GitLab Duo, and GitHub Copilot, to accelerate development, code reviews, and test creation while validating AI-generated outputs against engineering standards.

Software Engineer | ***BA3*** | ***Barclays*** , ***Pune, India*** *(Aug 2022 – Mar 2025)*

- Developed scalable backend services and data pipelines using using C#/.NET Core, SQL Server, and REST APIs, owning database development from table design and creation to stored procedures and optimized SQL transformation logic.
- Improved application performance by Redis API-level caching, SQL query and stored procedure optimization, and efficient Angular rendering and state management.
- Maintained high engineering quality standards through unit and integration testing, Test-Driven Development (TDD), code reviews, and CI/CD practices, consistently achieving high code quality.

EDUCATION

Bachelor of Technology in Computer Science & Technology | **CGPA: 9.21/10** 2018 – 2022

Usha Mittal Institute of Technology, ***SNDT Women's University*** *Mumbai, India*

PROJECTS

Payment Ledger & Reconciliation Platform | *Java 21, Spring Boot, React, Kafka, PostgreSQL, Redis*

Developed a distributed payment-processing platform with immutable double-entry accounting, idempotent payment processing, and transactional outbox patterns to support financial consistency and reliable event delivery. Implemented automated multi-source settlement reconciliation, concurrency-safe ledger posting, and append-only audit logging.

Risk & Regulatory Reporting Workbench | *C#/.NET 8, React, PostgreSQL*

Designed a full-stack financial reporting application with asynchronous risk calculations, canonical JSON snapshots (RFC 8785), Keycloak OAuth 2.0/OIDC, attribute- and role-based access control (ABAC/RBAC), multi-tenant isolation, maker-checker approvals, and tamper-evident SHA-256 hash chains.

Distributed Job Scheduler | *Go, PostgreSQL, gRPC, Docker, Prometheus, OpenTelemetry*

Engineered a high-throughput, fault-tolerant job processing engine leveraging PostgreSQL lock-free queries and advisory locks for leader election, featuring zero-loss worker crash recovery via visibility leases, exponential backoff retries with jitter, and dead-letter queue (DLQ) requeueing.
