PROFESSIONAL SUMMARY

Full-Stack Software Engineer specializing in enterprise microservices, secure RESTful API development, and distributed data pipelines. 4+ years of hands-on experience at Barclays delivering end-to-end backend and modern UI integrations for global compliance and risk platforms. Strong background in C#/.NET core, Angular, SQL database optimization, DevOps CI/CD pipelines, and Unit testing ($> 90\%$ coverage) under strict international banking regulations.

TECHNICAL SKILLS

Databases	SQL Server, PostgreSQL
Backend	C#,C++,C, JavaScript , Java (21), TypeScript, Python, Go (Golang)
Frontend	Angular, Node.js, React (18/19), Vite, Tailwind CSS, HTML5, CSS3
DevOps	Docker, Kubernetes, GitHub Actions (CI/CD), GitLab, OpenTelemetry, Jenkins
APIs and Tools	Swagger, Postman, Insomnia, Bitbucket, SonarQube, Jira, Confluence
Engineering Practices	Agile/Scrum, Code Reviews, Unit Testing, Performance Optimization, Technical Documentation
Domain Knowledge	Banking systems, Risk and Finance Platforms, Regulatory and Compliance systems

EXPERIENCE

Senior Software Engineer | ***Barclays*** , ***Pune, India*** *(Apr 2025 – Present)*

- Architected and delivered scalable full-stack features, leading end-to-end backend microservices (.NET Core/APIs) and Angular enterprise UI integrations.
- Optimized system performance and query latency by 20% across distributed workflows through Redis API-level caching, SQL indexing, and frontend state optimization.
- Diagnosed and resolved 20+ critical production defects and performance bottlenecks, coordinating cross-team root-cause analysis to ensure 99.9% high availability.
- Spearheaded Agile ceremonies, code reviews, and DevOps workflows, ensuring zero-downtime deployments and 100% compliance with global banking security standards.

Software Engineer | ***Barclays*** , ***Pune, India*** *(Aug 2022 – Mar 2025)*

- Engineered 5+ OAuth/Bearer-authenticated backend data pipelines and optimized complex SQL transformation logic, reducing analytical processing times by 10%.
- Authored detailed technical specs and system architecture diagrams for 4 large-scale backend services, establishing clean component interfaces and data models.
- Enforced strict banking security protocols and Test-Driven Development (TDD), writing robust unit/integration tests to maintain $> 90\%$ code coverage across backend repositories.

EDUCATION

Bachelor of Technology in Computer Science & Technology | **CGPA: 9.21/10** 2018 – 2022

Usha Mittal Institute of Technology, ***SNDT Women's University*** *Mumbai, India*

PROJECTS

Payment Ledger & Reconciliation Platform | *Java 21, Spring Boot, React, Kafka, PostgreSQL, Redis*

Developed a distributed payment-processing platform with immutable double-entry accounting, idempotent payment processing, and transactional outbox patterns to support financial consistency and reliable event delivery. Implemented automated multi-source settlement reconciliation, concurrency-safe ledger posting, and append-only audit logging.

Risk & Regulatory Reporting Workbench | *C#/.NET 8, React, PostgreSQL*

Designed a full-stack financial reporting application with asynchronous risk calculations, canonical JSON snapshots (RFC 8785), Keycloak OAuth 2.0/OIDC, attribute- and role-based access control (ABAC/RBAC), multi-tenant isolation, maker-checker approvals, and tamper-evident SHA-256 hash chains.

Distributed Job Scheduler | *Go, PostgreSQL, gRPC, Docker, Prometheus, OpenTelemetry*

Engineered a high-throughput, fault-tolerant job processing engine leveraging PostgreSQL lock-free queries and advisory locks for leader election, featuring zero-loss worker crash recovery via visibility leases, exponential backoff retries with jitter, and dead-letter queue (DLQ) requeueing.
